

**NEATMATCH**<sup>®</sup>  
decorated mdf

## Primed Neatmatch

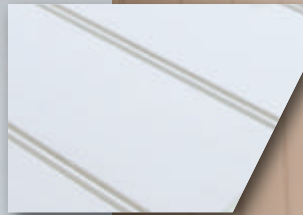

**The labour saving alternative to wood panelling**

Neatmatch is the labour saving way to cover walls and ceilings with the appearance of tongue & groove panelling without the problem of shrinkage. The primed board allows for faster finishing.

Available with split edges, lap jointed or tongue & grooved for easy jointing.

A wide range of profiles, sizes and thicknesses available on request.

Top coating in any colour a further option.

## Veneered Neatmatch

**The cost effective alternative to solid wood panelling**

An MDF panel with inset solid wood fillet and finished with a matching high quality veneer to create the effect of a solid wood panel.

## Neatrout

**The expanded range of perforated MDF panels**

**NEATROUT**<sup>®</sup>  
perforated mdf

**NEATBOND**<sup>™</sup>  
pressed panels

## Neatfinish

**NEATPAINT**<sup>™</sup>  
painted panels

**The full range of panel products can be supplied primed, painted or lacquered to a high quality smooth finish.**

The automated spray finishing line with multi-directional heads can produce a wide range of finishes.

## Bonded Products

**Stock and bespoke panels available**

Laminated two sided MR MDF available ex stock in White and Semi Matt Brown. Other colours and finishes are available on request. In addition a wide range of options are available using other substrates and surfacing materials.

# Neatform

**NEATFORM®**  
bendy mdf

## Save fabrication time and improve product quality for all curved surfaces

Bendy MDF can be used to create freestanding curves or be fixed to a framework to produce a wide range of smooth curved surfaces.

### Neatform Benefits

- Ready to paint and stain
- Panels can be laid-up flat with veneers or laminate before bending
- Excellent seam hiding qualities
- Follows intended curve without bumps or hollows
- Repeatability is great and results are predictable

## Veneered Neatform

### The fast way to produce veneered curved surfaces

Pre veneered boards are machined with standard Neatform grooving to eliminate the need for veneering on site.

Current crown cut species held in stock are:

- White Oak
- Ash
- Maple
- Cherry
- White Beech

Other species available on request.

**NEATFLEX®**  
bendy pip

The robust material for the one piece frame construction of curved surfaces for heavy duty applications. Neatflex pip is made from MR MDF and polymer impregnated paper. This specification enables strong smooth curves to be created where moisture may be present.

**Neatflex can be combined with itself, Neatform Bendy MDF, plywood or laminate to create frameless free-form curves.**

**NEATFLEX®**  
bendy ply

Neatflex Ply is made from lite MDF and poplar plywood. This specification enables strong smooth curves to be created where a lighter weight is required. Other specifications are available on request.

**Neatflex can be combined with itself, Neatform Bendy MDF, plywood or laminate to create frameless free-form curves.**

### Customise and enhance the Neat range

All the products in this brochure can be further enhanced by additional CNC machining.

In addition the utilisation of Neatform and Neatflex can be made easier by, for example, crafting MDF and plywood to make curved formers for desk fronts, column cases and concrete casting.
